

Business Requirements Document

Employee Leave Management System (ELMS)

Field	Details
Document Title	BRD – Employee Leave Management System
Prepared By	Prashanth M
Role	Business Analyst (Sample / Practice Project)
Version	1.0
Date	August 2026
Status	Draft – For Demonstration Purposes

1. Introduction

1.1 Purpose of the Document

This Business Requirements Document (BRD) defines the business needs, objectives, and functional and non-functional requirements for the Employee Leave Management System (ELMS). It serves as the foundation for solution design, development, and validation, and as an agreement point between business stakeholders and the technical delivery team.

1.2 Background

The organization currently manages employee leave requests through a manual, email-based process. Employees email their manager to request leave, managers respond manually, and HR maintains leave balances in a shared spreadsheet. This process is time-consuming, error-prone, lacks visibility, and creates delays in approval and inaccurate leave balance tracking.

1.3 Business Objective

- Reduce leave request processing time from an average of 3–5 days to under 24 hours.
- Eliminate manual tracking errors in employee leave balances.
- Provide employees and managers with real-time visibility into leave status and balances.
- Establish a single source of truth for leave data, accessible to HR, employees, and managers.

1.4 Scope

In Scope:

- Leave application submission by employees
- Leave approval/rejection workflow for managers
- Real-time leave balance tracking
- Notifications for leave request status changes
- Basic reporting for HR (leave taken by department, by employee, by leave type)

Out of Scope:

- Payroll integration (to be addressed in a future phase)
- Mobile application (Phase 1 is web-based only)
- Integration with third-party HRMS platforms

2. Stakeholder Identification

Stakeholder	Role	Interest / Involvement
Employees	End User	Submit leave requests, view balances and status
Reporting Managers	Approver	Review, approve, or reject leave requests
HR Team	Process Owner	Maintain leave policies, monitor balances, generate reports
IT / Development Team	Solution Delivery	Design, build, and maintain the system
Business Analyst	Requirements Owner	Gather, document, and validate requirements
Department Heads	Secondary Stakeholder	Review team-level leave trends and planning

3. Current State vs. Proposed State

Aspect	Current State (As-Is)	Proposed State (To-Be)
Leave Request	Email to manager	Submitted via system form
Approval	Manual email reply	In-system approve/reject with notification
Balance Tracking	Shared spreadsheet, manually updated	Automatically updated in real time
Visibility	No visibility for employee once submitted	Employee can track status anytime
Reporting	Manually compiled by HR	System-generated reports on demand

4. Functional Requirements

Req ID	Requirement Description	Priority
FR-01	The system shall allow employees to submit a leave request specifying leave type, start date, end date, and reason.	High
FR-02	The system shall automatically calculate the number of leave days requested, excluding weekends and public holidays.	High
FR-03	The system shall route the leave request to the employee's assigned reporting manager for approval.	High
FR-04	The system shall allow managers to approve or reject a leave request, with an optional comment field.	High
FR-05	The system shall send an automated notification to the employee once a request is approved or rejected.	Medium
FR-06	The system shall update the employee's leave balance automatically upon approval.	High
FR-07	The system shall allow employees to view their current leave balance and request history at any time.	Medium
FR-08	The system shall allow HR to generate reports on leave taken, filterable by department, employee, and leave type.	Medium
FR-09	The system shall prevent an employee from submitting a leave request that exceeds their available balance.	High
FR-10	The system shall allow HR to configure leave policies (e.g., annual leave entitlement) by employee category.	Low

5. Non-Functional Requirements

NFR ID	Requirement Description
NFR-01	The system shall be accessible via standard web browsers (Chrome, Edge, Firefox) without additional plug-ins.
NFR-02	The system shall support at least 500 concurrent users without performance degradation.
NFR-03	Leave request status shall update in real time, with no more than a 2-second delay.
NFR-04	The system shall maintain 99.5% uptime during business hours (9 AM–6 PM, Monday–Friday).
NFR-05	All employee data shall be encrypted in transit and at rest, in compliance with company data protection policy.
NFR-06	The system shall be accessible to users with disabilities, complying with WCAG 2.1 AA standards.

6. Assumptions and Constraints

6.1 Assumptions

- All employees have a valid company email address for notifications.
- Reporting manager hierarchy is already maintained and available in the HR master data system.
- Public holiday calendar is available and maintained centrally by HR.

6.2 Constraints

- The solution must be delivered within existing IT infrastructure; no new server procurement is planned for Phase 1.
- Budget for Phase 1 is capped, limiting scope to core leave request and approval functionality only.
- Project timeline: Phase 1 must be live before the next annual leave cycle begins.

7. Acceptance Criteria (Sample)

For FR-01 (Leave Request Submission):

- Given an employee is logged into the system, when they submit a leave request with valid dates and leave type, then the request should be created with a status of 'Pending Approval'.
- Given an employee submits a request exceeding their available balance, when they attempt to submit, then the system should display an error and prevent submission.

8. Glossary

Term	Definition
BRD	Business Requirements Document
ELMS	Employee Leave Management System
FR	Functional Requirement
NFR	Non-Functional Requirement
HRMS	Human Resource Management System

9. Document Approval

Name	Role	Signature / Approval Status
[Stakeholder Name]	HR Head	Pending
[Stakeholder Name]	IT Project Lead	Pending
Prashanth M	Business Analyst	Prepared

Note: This is a sample/practice Business Requirements Document created to demonstrate BA documentation skills as part of a professional portfolio. Stakeholder names and organizational details are placeholders.
